Providing valuable insight into the latest practice and design philosophies, this collection of readings and cases analyzes the defects that exist with traditional cost management systems, and shows how to design systems that will benefit a wide range of organizations. Opens with a thorough introduction to cost systems - with discussions on their use, product and process costing, operational control, financial reporting, and strategic relevance - and explores target costing, and ABC and product design and development. Considers the foundations of activity-based costing, including its necessity for companies, cost hierarchy, and activity attributes, and dedicates entire sections to the use of cost systems for managing customer and supplier relationships, and for designing and developing new products. Second Edition features include many new cases and a critical study of service industry and activity-based budgeting. For management consultants, CFO's, and controllers.

This book is the first to concentrate on all 32 bit microprocessors and the pentium. This comprehensive exploration of microprocessor technology introduces core concepts, techniques, and applications using the 80386, 80486, and Pentium processors, putting equal emphasis on assembly language software programming and microcomputer hardware/interfaces. The second part of this book presents software, memory, circuits, I/O and peripherals. The third part consists of PC/AT business interfacing, testing, troubleshooting, and the pentium. For anyone interested in Microprocessor Technology.
