Since its introduction in 1975, the BMW 3-series has earned a reputation as one of the world's greatest sports sedans. Unfortunately, it has also proven one of the more expensive to service and maintain. This book is dedicated to the legion of BMW 3-series owners who adore their cars and enjoy restoring, modifying, and maintaining them to perfection; its format allows more of these enthusiasts to get out into the garage and work on their BMWs-and in the process, to save a fortune. Created with the weekend mechanic in mind, this extensively illustrated manual offers 101 projects that will help you modify, maintain, and enhance your BMW 3-series sports sedan. Focusing on the 1984-1999 E30 and E36 models, 101 Performance Projects for Your BMW 3-Series presents all the necessary information, covers all the pitfalls, and assesses all the costs associated with performing an expansive array of weekend projects.

Counsels professionals on how to promote trustworthy relationships in a time of extreme distrust, sharing examples about individuals, teams, and organizations that have reaped the benefits of establishing trust in their business dealings.

Antistatic sprays from several different manufacturers are examined. The sprays are examined for contamination potential (i.e., outgassing and nonvolatile residue), corrosiveness on an aluminum mirror surface, and electrostatic effectiveness. In addition, the chemical composition of the antistatic sprays is determined by infrared spectrophotometry, mass spectrometry, and ultraviolet spectrophotometry. The results show that 12 of the 17 antistatic sprays examined have a low contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of these, only 2 demonstrate good electrostatic properties with respect to reducing voltage accumulation; these sprays did not show a fast voltage dissipation rate however. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is different and proper evaluation of the situation is necessary. Information on some of the properties of some antistatic sprays is presented in this document to aid in the evaluation process. Ming, James E. Goddard Space Flight Center

This book offers an insight into the primary and secondary manufacturing of different class of polymer matrix composites (PMCs). The major focus is on the fabrication of a variety of PMCs with substantial coverage of various processing techniques and related advantages and limitations. The book also describes secondary manufacturing processes such as machining and joining of PMCs and provides the know-how related to developing these techniques. It discusses recently commercialized tools and techniques and highlights the opportunities provided by the design and development of newer cutting tools and machining methods. The book covers material selection guidelines, product manufacturability, product development process, and cost-estimating techniques that help readers to understand where a process fits within the overall scheme and which is appropriate for a particular component. This book provides professionals with valuable information related to composites product manufacturing as well as state-of-the-art knowledge in this field.
