An Introduction to Bicomponent Fibers - Hills, Inc.

A bicomponent fiber is made of two materials, utilizing desired properties of each material. Such fibers can be created by extrusion spinning. One or both

Where To Download An Introduction To

Materials may remain in the finished product, or one material may be dissolved, leaving only one material remaining. For example, DuPont created the highly coiled elastic fiber called cantrese having two different nylon polymers side-by-side.

Bicomponent fiber - Wikipedia

Page 13/37

Where To Download An Introduction To

A bicomponent fiber is spun from two or more polymers extruded from one spinneret to form a single fiber. Typical bicomponent cross sections are core–sheath, side-by-side, and multiple core configurations. Core–sheath types are commonly used as binder fibers for nonwovens, side-by-side to design

Where To Download An Introduction To

different polymers. Those polymers can be embedded in various ways: for example by the core / sheath combination or side by side as pictured below: Thanks to this combination of polymers, bicomponent yarns have the properties of both polymers, enabling them to be applied in a range of applications like adhesion

Bicomponent - Introduction

INDA (2002): “A Fabric made directly from a web of fiber, without the yarn preparation necessary for weaving and knitting. In a nonwoven the assembly of textile fibers is held together 1) by

Where To Download An Introduction To

mechanical interlocking in a random web or mat; 2) by fusing of the fibers, as in the case of thermoplastic fibers; or 3) by bonding with a

Bicomponent Fibers and its Applications

The term bicomponent fiber, also known

Where To Download An Introduction To

as a conjugate fiber, refers to a single fiber that includes two varied polymer components inside the same filament. The production of bicomponent fibers is not a new concept - Dupont already introduced this idea in the mid 1960s. However, the processes used to produce bicomponent fibers were not streamlined, which
