The Antenna Theory Website

Radio antennas are a key element of any radio communications broadcast or wireless system. An antenna is required to radiate and receive the signals and therefore their performance is key to the operation of the overall radio system. If the radio antenna performance is poor, then it will limit the performance of the overall radio communications system, or whatever wireless system is using it.

Techniques based on the method of modal expansions, the Rayleigh-Stevenson expansion in inverse powers of the wavelength, and also the method of moments solution of integral equations are essentially restricted to the analysis of electromagnetic radiating structures which are small in terms of the wavelength.
