Blood Spatter Analysis or Blood Pattern Analysis (BPA) is the examination of bloodstain shapes, locations, and distribution patterns, to provide an interpretation of the physical events that gave rise to their origin. In forensic investigations, it is ubiquitous to encounter blood on the crime scene. This blood can be in the form of a pool, dried stains, spatter, expired blood, etc.

**All About Forensic & Investigative Sciences: Blood Spatter---**

Blood spatter has been traditionally organized into three categories: low velocity, medium velocity, and high velocity. The first is usually blood drops resulting from the normal gravitational pull. The drops are large, measuring 4mm, and round. Medium velocity patterns are most commonly seen in blunt force trauma and stabbings.

**Bloodstain Patterns—Criminal**

An object that leaves a void in a blood spatter pattern will contain a matching pattern on its surface. This allows analysts to replace it in the scene where it was initially. Void pattern analysis has proven useful in forensic investigations and in establishing the positions of both the assailant and the victim within a scene.

Bloodstain Pattern Analysis (BPA) is the study and analysis of bloodstains at a known or suspected crime scene with the purpose of drawing conclusions about the nature, timing and other details of the crime. It is one of the several specialties of forensic science.. The use of bloodstains as evidence is not new. However, since the late 1950s, BPA experts have claimed to be able to use biology ...

**Bloodstain pattern analysis—Wikipedia**

There are eight primary blood patterns. #1 A Single Drop: A single drop of blood, falling vertically and forming an evenly spread spherical shape shows that the victim was standing and motionless at the time they bled, with the blood stain being more tear-drop shaped, the greater the victim moves. Although the higher the blood falls the larger the stain should be, the width of the stain can't tell you what height it fell from, as this also depends on the quantity of the blood and the ...

**Blood Pattern Analysis: Drops, Stains, Spatter, Cast-Offs**

Spatter Patterns occur when a blood mass is broken up into droplets. The droplets are projected out from the origin to the surrounding surfaces within the scene. Blood spatter can occur on a variety of surfaces, such as carpet, wood, tile, wallpaper, clothing, etc. The type of surface the blood strikes affects the amount of the resulting ...
