Chapter 02 Atoms, Ions, and Molecules

• Ions are atoms or groups of atoms with either a positive charge or a negative charge. • They are produced from the loss or gain of one or more electrons, respectively. • Maintaining homeostatic blood concentration of each of these ions is critical to health because it preserves or sustains what is called electrolyte balance.

-2. the sample is vaporised and then ionised to form positive ions.-3. the ions are accelerated. Heavier ions move more slowly and are more difficult to deflect than lighter ions, so the ions of each isotope are separated.-4. the ions are detected on a mass spectrum as a mass-to-charge ratio, m/z .
