How The Brain Learns

How the Brain Learns. We have known since antiquity that the seat of learning is the human brain. But it has only been in the last decade that neuroscience researchers have been able to go inside the brain and observe how learning actually occurs at the molecular level. New technologies like diffusion imaging have opened up the brain's inner workings and allowed scientists to "see" what is going on inside the brain when people are engaged in learning.

The brain is constantly  
restructuring in response to  
learning and the  
environment. This is known  
as plasticity. Plasticity  
involves creating and  
strengthening neural  
connections and weakening or  
removing others. Every time  
you learn, your brain uses  
plasticity to develop new  
neural pathways. Repetition

How does the brain learn? -  
eLearning

The vast majority of our behaviors, both conscious and unconscious, are guided by our ability to store meaningful experiences in memory and recall them when needed. As complex as it may seem, scientists are steadily making progress in unraveling how the brain accomplishes this feat. For University of Chicago neuroscientist David Freedman, PhD, associate professor of neurobiology, the key to better understanding the brain's ability to learn has been to

Learning how the brain  
learns - UChicago Medicine  
The brain is a complex organ  
made up of neurons, glial  
cells, blood vessels and  
many, many cells organized  
into specialized areas.  
These regions all  
participate in learning in  
some way. Some have  
functions focused on special  
types of learning such as  
language, face recognition,  
motor activity, and spatial  
recognition.
