The book of " *Prunus* " contains chapters on breeding, germplasm, fruit tree physiology, and production of *Prunus* species, written by authors from different parts of the world. *Prunus* is one of the most important fruit genera widely spread according to the various climatic and soil conditions. This wide adaptability of the *Prunus* genus gives an opportunity for it to be grown in many parts of the world. In modern taxonomy, subgenera of *Prunus* such as *Amygdalus*, *Cerasus*, *Laurocerasus*, *Lithocerasus*, *Padus* and *Prunus* include many species among which *Prunus persica* L., *Prunus domestica* L., *Prunus armeniaca* L., *Prunus avium* L. are the main ones. Briefly, this book is on *Prunus* species, which is one of the main fruit and nursery plants grown in the world.

**Fruit Oils: Chemistry and Functionality** presents a comprehensive overview of recent advances in the chemistry and functionality of lipid bioactive phytochemicals found in fruit oils. The chapters in this text examine the composition, physicochemical characteristics and organoleptic attributes of each of the major fruit oils. The nutritional quality, oxidative stability, and potential food and non-food applications of these oils are also extensively covered. The potential health benefits of the bioactive lipids found in these fruit oils are also a focus of this text. For each oil presented, the levels of omega-9, omega-6 and omega-3 fatty acids are specified, indicating the level of health-promoting traits exhibited in each. The oils and fats extracted from fruits generally differ from one another both in terms of their major and minor bioactive constituents. The methods used to extract oils and fats as well as the processing techniques such as refining, bleaching and deodorization affect their major and minor constituents. In addition, different post-processing treatments of fruit oils and fats may alert or degrade important bioactive constituents. Treatments such as heating, frying, cooking and storage and major constituents such as sterols and tocopherols are extensively covered in this text. Although there have been reference works published on the composition and biological properties of lipids from oilseeds, there is currently no book focused on the composition and functionality of fruit oils. **Fruit Oils: Chemistry and Functionality** aims to fill this gap for researchers, presenting a detailed overview of the chemical makeup and functionality of all the important fruit oils.

**Neonatal and Infant Dermatology** is a unique comprehensive and heavily illustrated reference on the dermatologic diseases of newborns and infants. It includes discussions of common and uncommon conditions seen in infants at birth and in the first few months of life. With over 600 superb photographs of normal and abnormal skin conditions including images of rare conditions, this easily accessible resource is essential for pediatricians, neonatologists, and dermatologists as well as other healthcare professionals involved in the diagnosis and treatment of dermatologic diseases in infants and newborns. Consult this title on your favorite e-reader, conduct rapid searches, and adjust font sizes for optimal readability. Get the depth of coverage you need to effectively diagnose skin conditions in neonates and infants. Expedite effective differential diagnoses with guidance from algorithms, lists, text, boxes and supporting images. Benefit from the experience of over 60 contributors from around the world lead by Drs. Lawrence F. Eichenfield and Ilona J. Frieden, two of the most important names in the fields of dermatology and pediatrics. Glean all essential, up-to-date, need-to-know information with new chapters on Papulosquamous and Lichenoid Disorders, Acneiform and Sweat-gland disorders and two individual chapters on Vascular Malformations and Vascular Tumors. See what to expect and how to proceed with new, high-quality illustrations and photos that provide even more visual examples of abnormal and normal conditions.

Covers developments in food safety and foodborne illness, organizing information to provide easy access to many topics, both general and specific. Comprehensive summaries of important advances in food science, compiled from over 550 sources worldwide, are presented.

This selection of key presentations from the Food Structures, Digestion and Health conference is devoted to the unique and challenging interface between food science and nutrition, and brings together scientists across several disciplines to address cutting-edge research issues. Topics include modeling of the gastrointestinal tract, effect of structures on digestion, and design for healthy foods. New knowledge in this area is vital to enable the international food industry to design of a new generation of foods with enhanced health and sensory attributes. The multidisciplinary approach includes research findings by internationally renowned scientists, and presents new research findings important and pertinent to professionals in both the food science and nutrition fields. Describes the science underpinning typical food structures providing guidance on food structure in different conditions Includes novel approaches to the design of healthy foods using real-world examples of applied research and design written by top leaders in the area Describes and validates model systems for understanding digestion and predicting digestion kinetics

Have you tried going keto and found that it has made you feel worse rather than better? Does keto seem to make sense in so many ways yet seem just slightly off in several key ones? What if it's not just you? What if traditional keto diet simply fails to encompass the needs of the female body? Naomi Whittel, the New York Times bestselling author of *Glow15*, explores how the problem isn't keto, it's fibre. Ninety percent of women are fibre deficient, and when women go the standard keto route, they often lean into animal-based, high-fat, zero-fibre foods, leading to low energy, brain fog and unnecessary weight gain. Whittel explores the prebiotic fibre sources that work within a keto framework to speed up your metabolism, transform your microbiome, balance your hormones and keep you feeling full. Included are a 22-day meal plan, movement plan and delicious, easy-to-make recipes.

There are no short-cuts to becoming a Witch. Traditionally, students take a year and a day to prepare for their initiation into the Craft. Based on this age-old custom, *Wicca: A Year and a Day* is a one-of-a-kind daily guide that introduces Witchcraft over a 366-day cycle. Ideal for solitary students, this intensive study course teaches the core content of Wiccan practice: the tides of time, the wonders of the seasons, the ways of herbs and magic, the mysticism of the Old Ones, and the inner disciplines of seers and sages. Daily lessons include exercises, Wiccan theology and lore, and discussions relating to circle work, magical correspondences, holidays, deities, tools, healing, and divination.
