Este no es un libro de lectura. Tampoco es un libro de texto. Se trata de un libro de notas. Notas recopiladas a lo largo de años de estudio de certificaciones de Cisco Systems. Una vez recopiladas estas notas y puestas juntas, cuando mis amigos, conocidos y alumnos lo leían, me decían que era un excelente documento de consulta rápida, como repaso antes de un examen o como guía práctica de configuración de redes. Por eso he decidido publicarlo, para que otros profesionales, como tú, puedan utilizarlo en su trabajo diario. Este documento ha surgido a partir de los planes de formación para los siguientes exámenes de Cisco:

- Interconnecting Cisco Network Devices (ICND)
- Design Cisco Networks (DCN)
- Building Cisco Multilayer Switched Networks (BCMSN)
- Building Scalable Cisco Networks (BSCN)
- Building Cisco Remote Access Networks (BCRAN)
- Cisco Internetwork Troubleshooting (CIT)
- Cisco Internetwork Design (CID)
- Cisco Composite (COMP)
- Cisco QoS

In The Implosion of Capitalism world-renowned political economist Samir Amin connects the key events of our times - financial crisis, Eurozone implosion, the emerging BRIC nations and

the rise of political Islam - identifying them as symptoms of a profound systemic crisis. In light of these major crises and tensions, Amin updates and modifies the classical definitions of social classes, political parties, social movements and ideology. In doing so he exposes the reality of monopoly capitalism in its contemporary global form. In a bravura conclusion, Amin argues that the current capitalist system is not viable and that implosion is unavoidable. The Implosion of Capitalism makes clear the stark choices facing humanity - and the urgent need for a more humane global order.

Port-based authentication is a "network access control" concept in which a particular device is evaluated before being permitted to communicate with other devices located on the network. 802.1X Port-Based Authentication examines how this concept can be applied and the effects of its application to the majority of computer networks in existence today. 802.1X is a standard that extends the Extensible Authentication Protocol (EAP) over a Local Area Network (LAN) through a process called Extensible Authentication Protocol Over LANs (EAPOL). The text presents an introductory overview of port-based authentication including

a description of 802.1X port-based authentication, a history of the standard and the technical documents published, and details of the connections among the three network components. It focuses on the technical aspect of 802.1X and the related protocols and components involved in implementing it in a network. The book provides an in-depth discussion of technology, design, and implementation with a specific focus on Cisco devices. Including examples derived from the 802.1X implementation, it also addresses troubleshooting issues in a Cisco environment. Each chapter contains a subject overview. Incorporating theoretical and practical approaches, 802.1X Port-Based Authentication seeks to define this complex concept in accessible terms. It explores various applications to today's computer networks using this particular network protocol.
