"A szerző kapcsolata a focihoz közismert. Akinek mégsem, az ebből a vékony könyvből ezt alaposan megtanulhatja, mint ahogy azt is, hogy a foci nem vicc, komoly dolog, s mindez olyan önriróniával van elővezetve, hogy ha nem is fetreng az ember a röhögéstől, de minimum végigkuncogja az egészet." Betlen Katalin, szerkesztő

A 12th International Conference on the Structure of Hungarian (Leiden, 2015). The contributions cover a wide range of topics and their significance in generative theorizing. The papers about morphosyntax focus on the formation of comparative clauses, the behavior of particle verbs, scope taking in deverbal nominal constructions, measure constructions, classifier constructions, the mass/count distinction as well as focus and quantifier scope. The papers about phonology investigate coexisting patterns of variation in vowel harmony, the representational account of vowel harmony and the nature of heteromorphemic vowel sequences. While the focus of the volume is on Hungarian, comparison is made with several other languages, such as English, German and Portuguese among others. The broad range of topics discussed in this volume will appeal both to scholars working on Hungarian and to a general audience of generative linguists.

The Encyclopedia of Trees and Shrubs not only provides the researcher with excellent descriptions of the world's best known specimens, it also helps the gardener, whether amateur or professional, choose the right trees and shrubs.
The purpose of this book is to argue for the claim that Hungarian sentence structure consists of a non-configurational propositional component, preceded by configurationally determined operator positions. In the course of this, various descriptive issues of Hungarian syntax will be analyzed, and various theoretical questions concerning the existence and nature of non-configurational languages will be addressed. The descriptive problems to be examined in Chapters 2 and 3 center around the word order of Hungarian sentences. Chapter 2 identifies an invariant structure in the apparently freely permutable Hungarian sentence, pointing out systematic correspondences between the structural position, interpre tation, and stressing and intonation of the different constituents. Chapter 3 analyzes the word order phenomenon traditionally called 'sentence inter- l twining' of complex sentences, and shows that the term, in fact, covers two different constructions (a structure resulting from operator movement, and a base generated pattern) with differences in constituent order, operator scope and V-object agreement. Chapter 4 deals interpretation, case assignment, with the coreference possibilities of reflexives, reciprocals, personal pro nouns, and lexical NPs. Finally, Chapter 5 assigns structures to the two major sentence types containing an infinitive. It analyzes infinitives with an AGR marker and a lexical subject, focusing on the problem of case assignment to the subject, as well as subject control constructions, accounting for their often paradoxical, simultaneously mono- and biclausal behaviour in respect to word order, operator scope, and V-object agreement.

A creature of Jewish mythology, a golem is an animated being made by man from clay and water who knows neither his own strength nor the extent of his ignorance. Like science and technology, the subjects of Harry Collins and Trevor Pinch's previous volumes, medicine is also a golem, and this Dr. Golem should not be blamed for its mistakes - they are, after all, our mistakes. The problem lies in its well-meaning clumsiness. Dr. Golem explores some of the mysteries and complexities of medicine while untangling the inherent conundrums of scientific research and highlighting its vagaries. Driven by the question of what to do in the face of the fallibility of medicine, Dr. Golem encourages a more inquisitive attitude toward the explanations and accounts offered by medical science. In eight chapters devoted to case studies of modern medicine, Collins and Pinch consider the prevalence of tonsillectomies, the placebo effect and randomized control trials, bogus doctors, CPR, the efficacy of Vitamin C in fighting cancer, chronic fatigue syndrome, AIDS cures, and vaccination. They also examine the tension between the conflicting faces of medicine: medicine as science versus medicine as a source of succor; the interests of an individual versus the interests of a group; and the benefits in the short term versus success rates in the long term. Throughout, Collins and Pinch remind readers that medical science is an economic as well as a social consideration, encapsulated for the authors in the timeless struggle to balance the good health of the many - with vaccinations, for instance - with the good health of a few - those who have adverse reactions to the vaccine. In an age when the deaths of research subjects, the early termination of clinical trials, and the research guidelines for stem cells are front-page news, Dr. Golem is a timely analysis of the limitations of medicine that never loses sight of its strengths.

A fundamentally new approach to the theory of phonology and its relation to syntax is developed in this book, which is the first to address the question of the relation between syntax and phonology in a systematic way.This general theory differs from its predecessors in the generative tradition in several respects. By arguing that the intonational structure of a sentence determines certain aspects of its stress pattern or rhythmic structure, and not vice versa, it provides a novel view of the intonation-stress relation. It also offers a new theory of the focus-prosody relation that solves a variety of classic puzzles and involves an appeal to the place of a focused constituent in the predicate-argument structure of the sentence. The book also includes other novel features, among them a development of the metrical grid theory of stress (including a complete treatment of English word stress in this framework), the representation of juncture in terms of "silent" positions in the metrical grid (with a treatment of sandhi in terms of this rhythmic juncture), and a "rhythmic" nonsyntactic approach to the basic phonology of function words in EnglishElisabeth O. Selkirk is Professor of Linguistics at the University of Massachusetts, Amherst. This book is tenth in the series, Current Studies in Linguistics.

Solving non-routine problems is a key competence in a world full of changes, uncertainty and surprise where we strive to achieve so many ambitious goals. But the world is also full of solutions because of the extraordinary competences of humans who search for and find them.

This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. Organized for consistency, coherence, and readability, this fully updated text covers all areas of prevention in dental care. PRIMARY PREVENTIVE DENTISTRY, 8/e first describes dental diseases and conditions, helping students clearly understand the processes that can be prevented through the use of preventive modalities or ideas. Next, it presents detailed strategies to prevent these diseases and conditions. Throughout, specific target populations are defined and described based upon scientifically valid preventive strategies aimed at their needs. This edition improves student understanding with more photos, illustrations, diagrams, and tables; highlights “fun facts” about the topic; adds a new chapter on the important influence culture plays in preventive dental care; and is supported by many new web-based review questions and case studies for each chapter.

In The Age of Defeat, the third volume of the Outsider Cycle, Colin Wilson introduces his New Existentialism as the basis for the revolution in thought that we need to bring about; a revolt against insignificance and ordinariness. The New Existentialism is a practical and strong-willed philosophy that will renew the concept of Man as hero. It emphasises the extraordinary in us.The

Age of Defeat examines the loss of the hero in Western culture and the implications of that loss for humanity. When it was written in the middle of the 20th century, it was the idea of the hero that was endangered. Today it is Man, his identity and his masculinity, who is verging on extinction. The concept of Man is one of the most ambiguous and puzzling in our culture. It might be a good moment to remember what to be a Man used to imply.
