One of the most
commonly used
design patterns is

the factory pattern.

In this pattern, a class simply creates the object you want to use.

Consider the following example of the factory pattern:

manually (you could also use

`get_object_vars()`, but this is shorter):

```
<?php $clone =

"welcome.php".

The form data is sent with the HTTP POST method. To

display the submitted data you could simply echo all the variables.

The "welcome.php" looks like this:
