The solar cell is a semi conductor device, which converts the solar energy into electrical energy. It is also called a photovoltaic cell. A solar panel consists of numbers of solar cells connected in series or parallel.

SOLAR CELL CHARACTERISTICS - nitttrchd.ac.in

A solar cell is basically a semiconductor p-n junction device. It is formed by joining p- type (high concentration of hole or deficiency of electron) and n-type (high concentration of electron) semiconductor material. at the junction excess electrons from n-type try to diffuse to p-side and vice-versa.
