Essay from the year 2012 in the subject Politics - International Politics - Region: Western Europe, grade: keine, Maastricht University, course: European Studies, language: English, abstract: This paper deals with the process of state formation and nation building in England from the high Middle Ages until the end of the nineteenth century. Furthermore, it discusses whether England had been first a state or a nation or if this process occurred concurrently. It aims to determine when, how and why these developments proceeded in England the way they did, and if England’s changes differed from the rest of Europe. This paper claims that in the case of England, state and nation building went hand in hand resulting in an early English nation-state. The rise of a national consciousness as well as the establishment of a sovereign state protecting individual rights would not have been possible without the early formation of parliament. Therefore, this paper argues that the evolvement of Parliament was essential and played a crucial role in shaping England into a nation state.

This book traces the impact of exile in the formation of independent republics in Chile and the Río de la Plata in the decades after independence. Exile was central to state and nation formation, playing a role in the emergence of territorial borders and Romantic notions of national difference, while creating a transnational political culture that spanned the new independent nations. Analyzing the mobility of a large cohort of largely elite political émigrés from Chile and the Río de la Plata across much of South America before 1862, Edward Blumenthal reinterprets the political thought of well-known figures in a transnational context of exile. As Blumenthal shows, exile was part of a reflexive process in which elites imagined the nation from abroad while gaining experience building the same state and civil society institutions they considered integral to their republican nation-building projects.

"State Formation in the Liberal Era transforms our understanding of post-colonial Latin America. This book represents a unique endeavor to elucidate the story of Kosovo's unilateral quest for statehood. It is an inquiry into the international legal aspects and processes that shaped and surrounded the creation of the state of Kosovo. Being created outside the post-colonial context, Kosovo offers a unique yet controversial example of state emergence both in the theory and practice of creation of states. Accordingly, the book investigates the legal pathways, strategies, developments and policy positions of international agencies/actors and regional players (in particular the EU) that helped Kosovo to establish its independence and gradually acquire statehood. Although contested, Kosovo, and its quest for statehood, represents a unique example of successful unilateral secession. The book therefore explores and analyses patterns of state formation and nation-building in Kosovo, and its transition to democracy. It presents a three-level assessment. First, seen from a historical perspective, the book examines the validity of the right of Kosovar-Albanians to self-determination and remedial secession. Second, from a legal positivist perspective, it scrutinizes all of the legalist arguments that support Kosovo's right to statehood, and claims that both traditional and legality-based criteria for statehood remain insufficient to determine whether Kosovo has achieved statehood. Third, from a post-factum perspective, the book analyzes the scope and extent to which the internationally blended element was decisive in Kosovo's state-formation and state-building processes. It explains how the EU's involvement as an 'internationally blended element' in Kosovo's efforts to achieve statehood was instrumental and played a crucial role in shaping the emerging state. In particular, the book elaborates on how the EU was able to streamline its mode of intervention in the context of state-building and reform.
