Study Guide Questions Momentum And Its Conservation

Reason:For momentum to be conserved, the system should be closed and isolated. That is, no mass is lost or gained and there are no forces acting on the system by the object outside of it. However, as the goalkeeper kicks the ball, he applies an external force to the ball and hence the system does not remain isolated.

Online Library Study Guide Momentum Its Conservation Answers Collisions in one dimension. Momentum is conserved during a collision. The momentum of the system before (i) and afterwards (f) will be the same. In equation form, for a collision between two objects (1 and 2): p1,i + p2,i = p1,f + p2,f. (m1v1)i + (m2v2)i = (m1v1)f + (m2v2)f.

If the net force acting on an object is zero, then its momentum is conserved. Some forces in one direction may be zero while another direction will have several forces. For example, a ball in free fall would have a net force of zero in the x direction while the y direction's net force is not equal to zero in that specific case.

Momentum and Impulse | Unit 5: Momentum - AP Physics 1 ...

When we deal with momentum, conservation usually means one object transferring its momentum to another after a collision (think boulder to Jones); energy is again slightly more abstract. Conservation of energy can involve transfer of energy in collisions, but also covers the conversion of energy into different forms within the same object.
