Concise, portable, and packed with essential information, Manual of Clinical Oncology is an indispensable resource for understanding basic science, clinical findings, and available technology as they relate to the diagnosis and management patients with cancer. The practical format provides high-yield content useful for participating in rounds and making diagnostic and therapeutic decisions at the bedside. Edited by Dr. Bartosz Chmielowski and Dr. Mary Territo, both from UCLA School of Medicine, this eighth edition carries on the tradition of excellence set forth by longtime editor Dr. Dennis Casciato. Incorporates recent major achievements in immunotherapies, biologics, and targeted therapies. Features new chapters on the biology of cancer, immunotherapy, and cancer survivorship. Contains numerous diagnostic and treatment algorithms, as well as content on complications, for assistance with clinical decision making. Includes helpful appendices such as a glossary of cytogenetic nomenclature and combination chemotherapy regimens. Your book purchase includes a complimentary download of the enhanced eBook for iOS, Android, PC & Mac. Take advantage of these practical features that will improve your eBook experience: The ability to download the eBook on multiple devices at one time — providing a seamless reading experience online or offline Powerful search tools and smart navigation cross-links that allow you to search within this book, or across your entire library of VitalSource eBooks Multiple viewing options that enable you to scale images and text to any size without losing page clarity as well as responsive design The ability to highlight text and add notes with one click

Three of every four children and adolescents with cancer can now be cured. However, physicians are using increasingly intensive treatment regimens. These treatments can expose patients to toxic chemotherapeutic agents, invasive surgical procedures, and radiation oncology interventions that risk disfigurement, neuropsychiatric damage, and life-threatening organ toxicity. These potentially dire consequences have mandated that advances in cancer treatment go hand in hand with supportive care measures that sustain patients through their therapeutic ordeal and allow each patient to achieve maximum quality of life. In this book, now in its third edition, the discipline of supportive care in pediatric oncology is covered in depth. Supportive Care of Children with Cancer is a ready-reference handbook designed for use at the hospital bedside, in the oncology outpatient clinic, or in the physician's office. To create this book, leading experts in the field recommended approaches to supportive care which were then critically reviewed by members of the Children's Oncology Group, the world's largest cooperative study group for children's cancer. For students, house officers, fellows, pediatric oncologists, surgeons, nurses, nutritionists, social workers, and psychologists, this book provides essential information about the care of pediatric oncology patients. The third edition features a new chapter on recognition, prevention, and remediation of burnout in pediatric oncology staff members, while throughout the book, chapters have been revised and updated to reflect the impact of new antibiotic agents, new antiemetics, and new approaches to pain management.

Ron Pickering is a highly experienced teacher with many years' experience of maintaining students' interest in biology. Known for his informative, motivating style and straightforward explanations he maintains the same high level of interest and accessibility in this new book. The content of Complete Biology has been drawn from an analysis of all syllabuses with added material to ensure a match for IGCSE. The content is sufficient to stretch your students aiming for the top grades without sacrificing ease of understanding. · Double-page spreads increase accessibility · Questions on every spread for students to check their understanding, and learning objectives at the beginning to quickly identify relevant pages · Plenty of examination style questions set at two levels · Provides an excellent foundation for students wishing to progress to A-Level Biology · Allows students to appreciate the everyday importance of Biology

In the wrong hands, math can be deadly. Even the simplest numbers can become powerful forces when manipulated by politicians or the media, but in the case of the law, your liberty -- and your life -- can depend on the right calculation. In Math on Trial, mathematicians Leila Schneps and Coralie Colmez describe ten trials spanning from the nineteenth century to today, in which mathematical arguments were used -- and disastrously misused -- as evidence. They tell the stories of Sally Clark, who was accused of murdering her children by a doctor with a faulty sense of calculation; of nineteenth-century tycoon Hetty Green, whose dispute over her aunt's will became a signal case in the forensic use of mathematics; and of the case of Amanda Knox, in which a judge's misunderstanding of probability led him to

discount critical evidence -- which might have kept her in jail. Offering a fresh angle on cases from the nineteenth-century Dreyfus affair to the murder trial of Dutch nurse Lucia de Berk, Schneps and Colmez show how the improper application of mathematical concepts can mean the difference between walking free and life in prison. A colorful narrative of mathematical abuse, *Math on Trial* blends courtroom drama, history, and math to show that legal expertise isn't always enough to prove a person innocent.

Early Breast Cancer presents a wide-ranging analysis of diagnosis, pathology, and multidisciplinary management of the patient presenting with early breast cancer for radiologists, pathologists, surgeons, and medical oncologists. The second edition is fully updated to include changes in perspective on such issues as screening and conservative surgery.

The second edition of the *Criminal Law Sourcebook* has been significantly expanded in order to provide law students with a comprehensive selection of key materials drawn from law reports, statutes, Law Commission Consultation Papers and Reports, and Home Office publications. The materials reflect the range of topics taught on the vast majority of undergraduate and CPE criminal law modules, and provide a platform from which the reader can embark upon a more critical evaluation of both theory and doctrine. Extensive extracts are included from a number of recent landmark rulings, including decisions by the House of Lords in *B v DPP* (defence of mistake), *R v Smith* (objective test for the defence of provocation), *R v Hinks* (whether the recipient of a gift can be a thief), and *R v Powell and Daniels*; *R v English* (scope of accessorial liability for murder), and the Court of Appeal's ruling in *In Re A* (conjoined twins). Recent statutory initiatives that have been incorporated include the Protection from Harassment Act 1997, the Criminal Justice (Terrorism and Conspiracy) Act 1998, and the Sexual Offences (Amendment) Act 2000. The impact of the Human Rights Act 1998, in so far as it relates to substantive criminal law, is also covered. Substantial extracts are provided from all relevant Law Commission and Home Office law reform publications. In addition to the draft Criminal Code Bill, materials have been selected dealing with reform of sexual offences, consent, conspiracy to defraud, deception offences, offences against the person, accessorial liability and involuntary manslaughter.
