EaSI Financial Instruments. Date: 22 December 2016. The European Commission ' s Programme for Employment and Social Innovation (EaSI) aims at contributing to the implementation of the Europe 2020 strategy by supporting the EU's objective of high level employment, guaranteeing adequate social protection, fighting against social exclusion and poverty and improving working conditions.

EaSI Financial Instruments

It overviews entities such as the European Investment Bank and the European Investment Fund and explains instruments such as Public Private Partnership and Private Finance for Energy Efficiency. According to the report, three crucial conditions for financing are: 1. The financial instruments ' eligibility criteria 2.

Lending is our principal activity. We lend to clients of all sizes to support sustainable growth and jobs. Our assistance is often central to attracting other investors, be they international financial institutions, public or private banks. We can also provide quasi-equity operations, equity investments and investments in venture capital funds. Different financial instruments can be combined to support the same project as well as technical assistance.

Fi-compass was set-up by the European Commission (EC) and the European Investment Bank (EIB) to support Member States in understanding and making better use of financial instruments that utilise European Structural and Investment Funds (ESI Funds or ESIF). In the framework of the fi-compass advisory platform, the European Commission, Directorate-General for Maritime Affairs and Fisheries (DG MARE) with the support of EIB (fi-compass), has carried out a study aimed at assessing the experience in the use of, or the reasons for not using, financial instruments financed by the European Maritime and Fisheries Fund (EMFF) and exploring the potential use of financial instruments post-2020.

"City, transformed" has shown how Europe's cities have developed over the last 50 years. The European Investment Bank has adapted alongside them, building a greater, more focused role in urban development that takes it into truly innovative areas. Future cities need to face up to challenges in climate, productivity, knowledge, social mobility and resilience. Here's how the EU bank is setting up to be a partner on that path.

This study highlights the importance of photonics and microelectronics to propel the next wave of digital innovation and keep Europe competitive. Deep tech applications such as artificial intelligence, big data, additive manufacturing, robotics, the Internet of Things (IoT), and autonomous driving will require faster, more reliable, more energy efficient and more powerful photonics and semiconductor components. However, despite the high potential of these sectors, the study shows that many high-technology companies find it difficult to raise scale-up capital to fully capture the growing demand for their products and services after the first commercial launch. This sub-optimal funding situation is often linked to the complexity and high risk of photonics and microelectronics.

Supercomputing has become an indispensable resource in the digital age, thereby transforming research, businesses and our daily lives. It strongly increases the ability of researchers, industry, SMEs and government to process and analyse large amounts of data. The study demonstrates that the use of supercomputing for industrial and commercial applications in Europe has grown rapidly across many sectors such as automotive, renewable energy and mechanical engineering. To realise this potential, significant public ('cornerstone') investments in strategic HPC infrastructure and services are essential. This is expected to lead to the creation of public value via the growth of high-tech companies and the creation of new ecosystems across Europe. At the same time, new thinking is required about how to optimise the use of HPC infrastructure from a predominantly public good approach to ensure that adequate socio-economic returns are generated. This study analysis the key financing challenges of supercomputing in Europe and provides concrete recommendations on how to overcome the current investment gap in this strategic sector. It provides a new rationale for public and private investment as a basis for improving the conditions for robust and long-term financing.

This study provides an overview of the digitalisation landscape for small and medium enterprises in Portugal, and outlines potential support measures. Such actions aim to maximise access-to-funding for digital projects, enhance awareness and capabilities essential for the integration of digital solutions, and ultimately improve company productivity.

This volume provides a comprehensive analysis of the growing financial power of the European Union in a lively and accessible form. It examines how the budget is used to enhance the internal cohesion of the Union and its growing external commitments. Considerable attention is paid to lesser known aspects of EU finances such as the work of the EIB and the Court of Auditors. The management of EU finances is a central focus of this book. The book concludes with an assessment of the future prospects of the budget.

Provides a comprehensive overview of financial instruments and investment strategies being implemented throughout OECD Member and non-Member countries for local development.

The 2006 Interinstitutional Agreement (IIA) called for greater use of financial instruments in the European Union (EU) budget for the period of the multiannual financial framework (MFF) 2007-2013. The EU seeks to extend its budget funds through, for instance, actions financed by loans, risk-bearing or equity investment instruments, by pooling through EU Trust funds from multiple sources, through creating synergies with European Investment Bank (EIB) funds in mixed instruments for risk capital, guarantee funds, long terms loans, and with private funds and public-private partnerships (PPPs). Regular use of such instruments is innovative in the context of the EU budget, even though they have been used occasionally with EU budget funding over the past ten years. The study analyses current instruments and concludes with a brief review of expectations for the forthcoming multi-annual financial framework period, 2014 to 2020.
