A practical guide to understanding and treating children and adolescents prone to extreme levels of angry outbursts, Disruptive Mood: Irritability in Children and Adolescents is based on the very latest research and theory. Providing both a clinical and scientific perspective on irritability in children, this book is a timely look at recent developments in the field. Abnormal states of anger are a common reason for referral to child health services, and cause concern in clinics, schools, and families. Misdiagnosis and treatment can stem from a lack of understanding of the mechanisms involved in high levels of anger in children, and Disruptive Mood: Irritability in Children and Adolescents provides clear guidance on the development of abnormal states of anger, their consequences for later development, and how to assess and make differential diagnoses between them. A useful resource for clinical practice, this book is concise and accessible, and offers tools for evaluating treatments. Disruptive Mood: Irritability in Children and Adolescents is designed for practitioners involved in child and adolescent mental health and education and researchers who need an introduction to this complex field.

Despite the fact that much evidence exists to prove that bipolar disorder affects a large amount of children, during the past century doctors have been very reluctant to diagnose bipolar disorder (BPD) before adulthood. In contemporary times, the bias against diagnosing bipolar disorder in youth has been perpetuated by the lack of agreed upon diagnostic criteria that accurately characterise the condition as it typically exists in childhood. As observed by a number of contributors to this volume, this bias extended to birth cohort studies around the world in that instruments designed to detect mania or bipolar disorder were almost never or rarely applied. In the US, the continued use of unmodified DSM-IV criteria to diagnose prepubertal-onset BPD has only recently been tempered by the knowledge that these criteria were developed based solely on observations in adult studies. While the diagnosis of bipolar disorder in childhood still remains the subject of some controversy, today, thankfully, the controversy has shifted from a debate about whether it can be diagnosed to how it is diagnosed. There is now a general consensus among clinicians and researchers all over the world that bipolar disorder does exist in youth and is associated with significant morbidity and mortality; however, the developmental continuity of prepubertal mania with adult bipolar disorder remains yet undetermined and we know very little and are still in great need to learn more about epidemiology, etiology, phenomenology, and treatment of this condition., This book aims to give the first glimpse of the current state of knowledge about paediatric bipolar disorder from around the world and provides an in-depth view of both the differences and the similarities in diagnosis, comorbidity, clinical and research concepts and treatment approaches of colleagues from different parts of the world as well as serves as a source for the historical development of child and adolescent psychiatry, and for the epidemiology of some frequently seen childhood disorders in various countries.

negative attitudes, prejudice, and stigma that often surround many of these disorders have contributed to this neglect. Lacking proper diagnosis and treatment, millions of individual lives are lost to disability and death. Such conditions exact both personal and economic costs on families, communities, and nations. The report describes the causes and risk factors associated with brain disorders. It focuses on six representative brain disorders that are prevalent in developing countries: developmental disabilities, epilepsy, schizophrenia, bipolar disorder, depression, and stroke. The report makes detailed recommendations of ways to reduce the toll exacted by these six disorders. In broader strokes, the report also proposes six major strategies toward reducing the overall burden of brain disorders in the developing world.
