Flower Structure and its Parts Understanding Leaf Anatomy And Morphology

The main light-collecting structure on a leaf is a large, broad, flat surface called the leaf blade. The blade is held away from the stem and supported by the petiole. Monocots have leaves with parallel veins. Dicots have leaves with veins that connect and branch from each other.

Understanding Leaf Anatomy and Morphology

There are several parts of a leaf: 4. 1. Tip or apex – this is the top of the leaf; It can be pointed, round, smooth, etc. 2. Margin – is the edge of the blade; This is quite specific to each species of plant. Some are smooth, toothed, lobed or incised. 3. Midrib – the central vein running down the center of the blade.

Lesson 4: Understanding Leaf Anatomy and Morphology

A. The main sun collecting structure on the leaf is a large broad flat surface called the leaf blade. The blade has many layers, which help the plant move and store photosynthesis materials and by-products. The blade is held away from the stem and supported by a leaf stem called the petiole. The petiole is not exactly like a stem, but it does have xylem and

Unit B: Plant Anatomy. Lesson 3: Understanding Leaf Anatomy and Morphology. Student Learning Objectives: Instruction in this lesson should result in students achieving the following objectives: 1. Describe the main parts of a leaf. 2. Describe some major types of leaves. 3. Discuss common vein patterns found in leaves. 4. Explain how a leaf is organized. 5.

~~Unit A: Basic Principles of Plant Science~~

In general, leaf anatomy and morphology did not differ between sensitive and tolerant plants, and therefore, these attributes do not appear to be the cause of the sensitivity differences in this species.

~~THE ROLE OF LEAF ANATOMY AND MORPHOLOGY IN DETERMINING ...~~

The leaf blade is connected to the stem by the petiole, which is the lifeline between the leaf and the rest of the plant. The petiole is similar to a stem in that it has xylem and phloem. Water and minerals flow into the leaf blade and food flows out of the leaf blade through the petiole. E-unit: Leaf Anatomy and Morphology Page 3 www.MyCAERT.com

~~Leaf Anatomy Key Worksheets – Larny Kids~~

Typically, morphology is contrasted with physiology, which deals with studies of the functions of organisms and their parts; function and structure are so closely interrelated, however, that their separation is somewhat artificial. Morphologists were originally concerned with the bones, muscles, blood vessels, and nerves comprised by the bodies of animals and the roots, stems, leaves, and flower parts comprised by the bodies of higher plants.
