~~Windows forms in C? | DaniWeb~~

Windows Forms vs. MFC Since its earliest days, Visual C++ has shipped with a library called MFC (Microsoft Foundation Classes). This library is used for writing C++ applications for Microsoft Windows, and it encapsulates mostly the part of the Windows API that deals with GUI programming, along with some other areas such as databases and networking.

~~Introducing Windows Forms 1 - Visual C++~~

The Windows API (also known as the Win32 API, Windows Desktop API, and Windows Classic API) is a C-language-based framework for creating Windows applications. It has been in existence since the 1980s and has been used to create Windows applications for decades. More advanced and easier-to-program frameworks have been built on top of the Windows API.
